Sitemap & Architecture Plan

A single unified website for architectural & decorative lighting —
showcase, catalog, and WhatsApp-based ordering in one bilingual, black
/ gold experience

Single-site model (no separate shop domain) • Bilingual EN / AR toggle • Navy / Gold identity

Project Direction

Kiswani Lights runs as **one website** — there is no separate corporate/shop split. The same domain carries brand storytelling, the full product catalog, and ordering, unified under one identity: near-black `#0F1822`, gold `#FFDA01`, warm off-white `#F4F2ED`, IBM Plex Sans Arabic, bilingual English / Arabic via an in-page language toggle.

Ordering does not use a payment gateway: the cart collects items client-side, and checkout hands the order to a Kiswani advisor over **WhatsApp**, who confirms pricing, availability, and delivery — closer in spirit to a showroom than a self-serve store.

Current build vs. recommended additions

TOPIC	CURRENTLY BUILT	RECOMMENDED
Number of websites	One site	One site (unchanged)
Home page	Single scrolling page (hero, collections, types, products, projects, contact as anchors)	Keep as-is — it is the strongest asset
Company story	Not present — no standalone About page	Add <code>/about</code>
Order confirmation	WhatsApp opens in a new tab; no in-site confirmation	Add an on-page confirmation state <code>/checkout/thank-you</code>
Legal pages	None	Add <code>/privacy</code> , <code>/terms</code>
Search	None — browsing only	Optional, catalog is small (10 products)
SEO infrastructure	No <code>sitemap.ts</code> , <code>robots.ts</code> , or <code>not-found.tsx</code>	Add all three
Language routing	Client-side toggle, same URL for both languages	Keep — matches a small, single-domain catalog

Single-Site Recommendation

RECOMMENDATION

Keep Kiswani Lights as **one site on one domain** — do not split into a separate corporate site and shop, and do not move the catalog to a subdomain.

CONSIDERATION	ONE SITE (CURRENT MODEL)	SPLIT CORPORATE + SHOP
Catalog size	10 products across 4 categories — fits comfortably on one site	Unnecessary complexity for this scale
Ordering model	Advisor-confirmed WhatsApp orders suit one unified journey	Only pays off with self-serve checkout + online payment
Audience	Homeowners, designers, and project buyers browse the same catalog	Kiswani has no distinct wholesale/professional audience today
Maintenance	One Next.js app, one deploy, one domain	Two deploys, two DNS records, duplicated brand system

When to revisit this: if Kiswani later introduces real online payment, customer accounts, or a distinct trade/wholesale price list, a `shop.kiswanilights.com` split (mirroring the RUVO model) becomes worth the overhead. Until then, one site stays simpler and cheaper to run.

Site Overview

Navigation & ordering flow

- **Discover.** The home page tells the brand story through sections — hero, collections preview, lighting types, featured products, projects, and contact — all reachable via in-page anchors from the header.
- **Browse.** Each collection (`/collections/[slug]`) lists its products; each product (`/products/[slug]`) shows specs, a datasheet PDF, and "Add to cart".
- **Order.** The cart drawer is available from any page. Checkout (`/checkout`) collects delivery details and opens WhatsApp with a pre-filled order message to a Kiswani advisor.
- **Language.** A single toggle switches the entire UI between English and Arabic (with RTL) without changing the URL — no `/ar` route prefix today.

Kiswani Lights — Full Sitemap

■ built today ■ recommended addition

kiswanilights.com – Kiswani Lights (single site)

- └─ **Home** /
 - └─ Hero
 - └─ Collections preview #collections
 - └─ Lighting types #types
 - └─ Featured products #products
 - └─ Projects #projects
 - └─ Contact #contact
- └─ **Collections**
 - └─ Collection detail /collections/[slug]
(decorative · interior · technical · accent)
- └─ **Products**
 - └─ Product detail /products/[slug]
gallery · specs · datasheet PDF · "Ask about it" (WhatsApp) · add to cart
- └─ Cart (drawer overlay, no dedicated route)
- └─ **Checkout** /checkout
 - └─ Order summary
 - └─ Customer & delivery form
 - └─ Send via WhatsApp
 - └─ Order confirmation /checkout/thank-you [NEW]
- └─ **About Kiswani** /about [NEW]
 - └─ Brand story
 - └─ Why Kiswani
- └─ **Support** /support [NEW]
 - └─ Frequently asked questions
 - └─ Warranty & product care
 - └─ Contact & WhatsApp
- └─ **Legal** [NEW]
 - └─ Privacy policy /privacy
 - └─ Terms of use /terms
- └─ **Utility (SEO / errors)** [NEW]
 - └─ sitemap.xml app/sitemap.ts
 - └─ robots.txt app/robots.ts
 - └─ 404 page app/not-found.tsx

Routes (English / Arabic toggle)

Kiswani does not use locale-prefixed URLs — one route serves both languages, switched client-side. The table below lists routes as they exist (or should exist) on the single domain.

ROUTE	STATUS	PURPOSE
/	Built	Home — all storytelling sections
/collections/[slug]	Built	Collection listing (4 categories)
/products/[slug]	Built	Product detail (10 products)
/checkout	Built	Cart review + WhatsApp order form
/checkout/thank-you	NEW	Confirms the order was sent, sets expectations for advisor follow-up
/about	NEW	Brand story, currently only implied through the footer
/support	NEW	FAQ, warranty, product care, contact
/privacy	NEW	Required for a commerce-adjacent site collecting customer data
/terms	NEW	Terms of use for orders placed via WhatsApp
/downloads/[code].pdf	Built	Static datasheet PDFs served from <code>/public/downloads</code>

Note: if Kiswani later wants Arabic pages indexed separately in search results, migrating to `/ar/...` route prefixes (Next.js `i18n` routing) is the natural next step — not required at the current catalog size.

Commerce Model

- **Advisor-confirmed ordering.** The cart and checkout form collect the order; final pricing, availability, lead time, delivery, and payment are confirmed by a Kiswani advisor over WhatsApp — no online payment gateway.
- **No accounts.** Guest-only; there is no login, order history, or saved address book. This matches the showroom-style buying flow and keeps the build simple.
- **WhatsApp is the single commercial channel** — both for "Ask about it" product inquiries and for the completed checkout order.

Shared Brand System

One design system already covers the whole site — there is nothing to "share" across sites, only to keep consistent as new pages are added:

- **Palette:** navy `#0F1822` , gold `#FFDA01` , off-white `#F4F2ED` , muted grey `#73787C` .
- **Type:** IBM Plex Sans Arabic (Latin + Arabic subsets), weights 300–700.
- **Components:** `BrandButton` , `CartDrawer` , `Header` / `LuxuryFooter` , scroll-linked motion (`LuxuryEnhancements.tsx`)
— reuse these for every new page rather than introducing new patterns.

SEO

- Add `app/sitemap.ts` and `app/robots.ts` — neither exists yet, so search engines have no crawl map.
- Add `app/not-found.tsx` for a branded 404 instead of the framework default.
- Give collection and product pages their own `generateMetadata` (titles/descriptions per slug) rather than relying on the root layout's static metadata.
- Add `Product` structured data (JSON-LD) on product pages — code, name, category, image — to qualify for rich results even without a listed price.

Analytics

- No analytics package is currently wired into the app — add GA4 (or a privacy-friendly alternative) before relying on any of the events below.
- Track: `view_item` (product page), `add_to_cart`, `begin_checkout` (checkout form opened), `whatsapp_order_sent` (order submitted), `whatsapp_inquiry_click` ("Ask about it").
- Track language-toggle usage to understand the Arabic/English split of visitors.

Implementation Phases

PHASE	SCOPE
1 — Foundations	Add <code>not-found.tsx</code> , <code>sitemap.ts</code> , <code>robots.ts</code> , and per-page metadata. No visual changes.
2 — Trust & legal	Add <code>/about</code> , <code>/privacy</code> , <code>/terms</code> using the existing Header/Footer shell and brand components.
3 — Order confirmation	Add an on-site confirmation state after checkout (<code>/checkout/thank-you</code> or an in-page success view) so the order isn't only confirmed by the WhatsApp tab opening.
4 — Support hub	Add <code>/support</code> with FAQ, warranty, and product-care content, consolidating what's currently only in the footer.
5 — Analytics & SEO polish	Wire up GA4 events, add product structured data, verify Arabic/English metadata parity.
6 — Optional: accounts & payment	Only if Kiswani wants self-serve checkout later — add real payment and customer accounts. Revisit the single-site vs. split-site decision at that point.

Current Production Website

No deployed production URL is recorded in this repository — the project currently runs locally via `npm run dev` (vnext / Cloudflare). Once deployed, record the URL here so this report stays a live reference.
